SENIOR SOFTWARE ENGINEER | BACKEND (PHP / LARAVEL / MYSQL / AZURE)

Backend-focused Senior Software Engineer with 10+ years of experience building scalable web applications and REST APIs. Strong expertise in Laravel, PHP, MySQL, with exposure to Python (Flask/Django) and cloud-based integrations using Azure. Proven track record in backend system design, performance optimization, and data integration pipelines for enterprise applications.

Core Strengths

Backend Engineering: Laravel, PHP, REST API design, MVC architecture

Cloud Integration: Azure Blob Storage (data sync, file handling)

CI/CD & DevOps: Azure Git, CI/CD pipelines (build, deploy automation)

Database Optimization: MySQL query tuning, indexing, performance tuning

Scalable Systems: API-first architecture, modular backend design

System Integration: Third-party APIs, payments, shipment systems

Problem Solving: Production debugging, performance bottleneck resolution

Technical Skills

Languages: PHP, SQL, Python

Frameworks: Laravel, CodeIgniter, Flask, Django, PySpark

Cloud & DevOps: Azure Blob Storage, Azure Repos, CI/CD Pipelines

Frontend: JavaScript (ES6), Bootstrap, React.js

Database: MySQL (query optimization, indexing)

Tools: GitHub, Jira

Concepts: REST APIs, MVC, API integrations, Multi-tenant Architecture, Microservices

Libraries: Breeze, Maatwebsite/Excel, Open-admin, Pandas, Numpy, Bootstrap, Redux.

Professional Experience

Technical Lead | LTM, Chennai (Jun 2021 – Present)

Designed and built scalable REST APIs using Laravel for PWA App based on React Js

Integrated backend with Azure Blob Storage for file handling and data synchronization

Used Azure Git and CI/CD pipelines for build and deployment automation

Improved application performance, reducing load time by ~4 seconds

Engineered reusable modules for multi-market deployment (8 regions)

Optimized performance through efficient SQL queries and backend improvements

Software Developer | Gnap Services (Nokia) (Jun 2018 – May 2021)

Built admin platforms using Django for internal operations

Designed and built scalable REST APIs.

Maintained and enhanced enterprise applications

Worked on analytics features using Python

Senior Web Developer | Glocom E-Commerce (Oct 2015 – May 2018)

Built backend systems using CodeIgniter for e-commerce platforms.

Implemented QR-based shipment tracking using unique signed tokens embedded in labels, enabling real-time scan-based order status visibility.

Designed order–shipment data model and built REST APIs to capture scan events and update shipment milestones with audit history.

Software Trainee | Bizards IT Solutions (Jun 2012 – Nov 2012)

Developed modules for hotel booking platform using CakePHP

Integrated payment gateways such as Authorize.net and PayPal

Certifications

React.js – Guvi Geek Networks (2024)

Managing Big Data with MySQL – Coursera (2022)

Advanced SQL – HackerRank (2022)
